

# Academic Poster

Your poster needs to be **written** in **French**, but once finished you will **present** it to the group in **English**. Obviously, you need to understand the content of the paper, enough to be able to explain what it is about in English and to be able to answer questions about it, also in English. But DO NOT panic, it is ok if there are elements you do not quite fully understand, and if you decide to leave out some of the more technical details (complex statistics...)

**Most importantly:** pick a topic/paper you find interesting! It is important because you will be spending a lot of time on it, so being interested in the content of the paper will make working on it much more pleasant. However, I would recommend you stick to subjects more or less closely related to computers and technologies, because it will be more relevant (e.g. virtual reality, video games, mobile technologies, computer-based learning...)

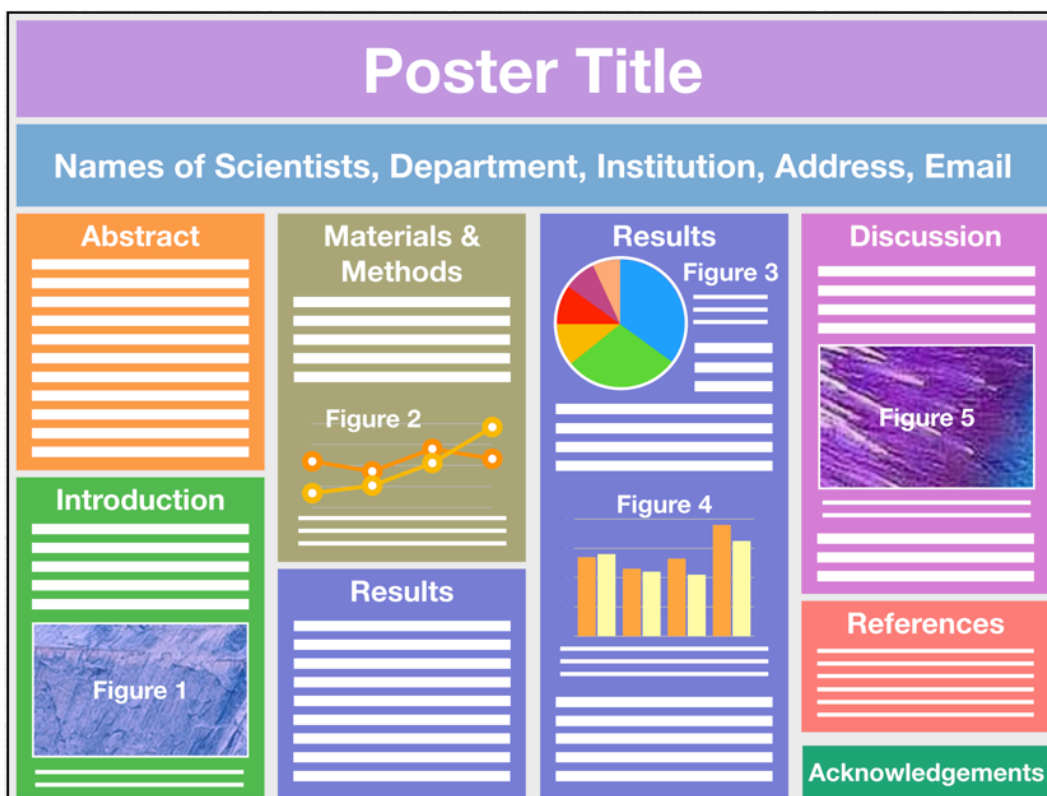

The link below will give you a summary of how to create a good poster - What makes a poster visually appealing as well as informative...

<https://prezi.com/pcovkdvojahz/creating-an-academic-poster/>

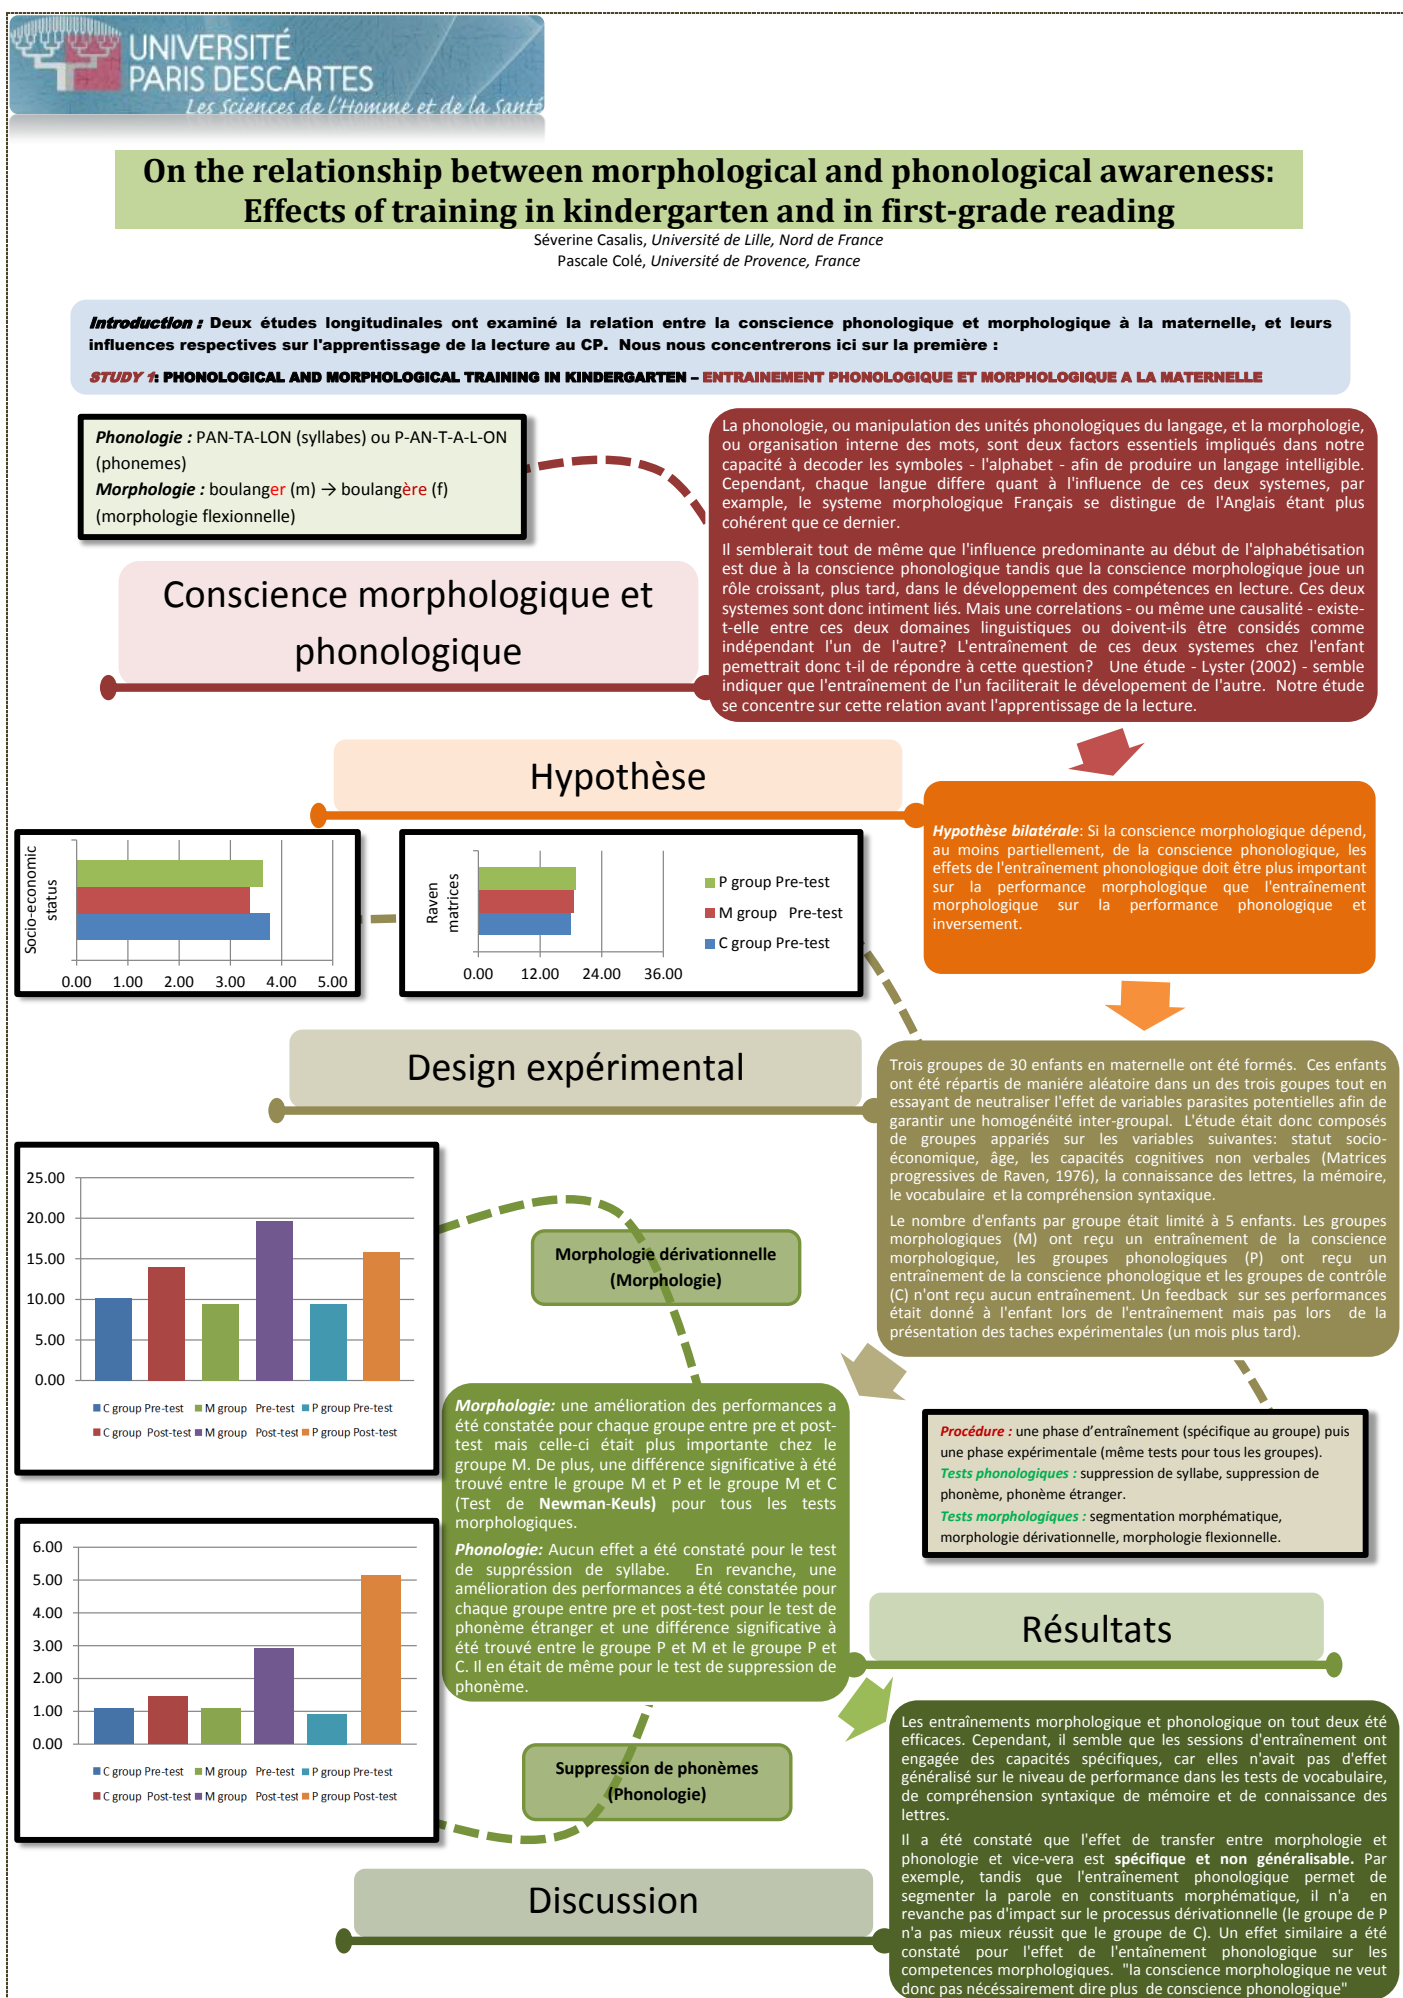

Keep in mind that the amount of written information you decide to include will depend on whether the information (textual and visual) you have selected is enough for the reader to understand the content of the paper. It is a fine balance between written and visual information, and how it is all organised.

Ask friends and family members to read your work and get feedback from them.
